Continuation of 5. does NOT place the application in condition for allowance because: Furuhashi reference at column 7, lines 45-60 discloses how the input/output of the frame memory 110 and the input/output of the line memory 111 are performed in synchronism with each other; and further the frame/line memory control circuit 112 serves to contrl the operation of the frame memory 110 and the line memory 111 thereby suggesting independent operations of the two as stated in the previous office action. Thus, Furuhashi provides support for independent processing.
